DETAILED ACTION

Election/Restrictions

1. Restriction to one for following inventions is required under 35 U.S.C. 121:

Group I, claims 1-4, 7-15, 18-22, 23-26, and 29-33, are drawn to application programming interface, classified in class 719, subclass 328.

Group II, claims 5-6, 16-17, 27-28, are drawn to loading balancing, classified in class 718, and subclass 105.

2. The inventions are distinct, each from the other because of the following reasons. Invention II and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instance case, invention I has separate utility, for example dynamic linking without using load balancing, and invention II has separate utility, for example as used in load balancing system without using dynamic linking. See MPEP 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, different searches and their recognized divergent subject matter, and the search required for group I is not required for group II, restriction for examination purposes as indicated is proper.

Conclusion
